

# QueryLens

- **Video (Grocery Shopping, Library)**

- A customer scans a “direction” sign with *QueryLens* to obtain information (Q&A) about where the product she wants to buy is.
- A customer scans a product with *QueryLens* to exchange information (Q&A) about the product (recipe, other products she may need to buy, etc.)

- Development of the current prototype was supported by IPA (Information-technology Promotion Agency, Japan).
- **This system needs to be extended in order to support people with cognitive disabilities**
  - Better ways to represent information (using image, audio, animation, etc.)
  - Adaptive displays to support an individual’s specific needs
